

All-in-One Solution

CCT AND POWER SELECT EMERGENCY TUBE

GREENCREATIVE

CCT AND POWER SELECT EMERGENCY TUBE

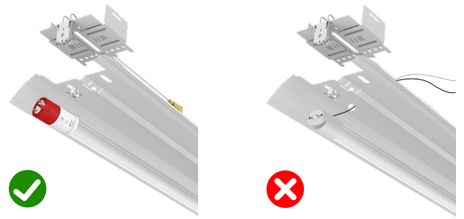

Illuminate as Needed – General and Emergency Lighting in One

The Emergency Lighting Tube offers an all-in-one emergency lighting solution with an integrated backup battery and twist-lockable end cap for versatile installation. It functions as both a DLC-qualified LED tube and a UL924 listed emergency unit when paired with provided pair of lamp holders, simplifying product selection and reducing installation and project costs.

Provided Non-shunted lamp holders

Simplified Installation with No External Wiring

Thanks to its innovative design, electrical connections are only made to the standalone lamp holders, with no exposed external wires extending directly from the emergency tube. Retrofitting is simple and convenient for most existing linear lighting fixtures, requiring no extra cutouts or wiring channels. Convenient during installation and safe during operation.

SelectKelvin & SelectDrive Technology - Easy To Stock

Equipped with SelectKelvin and SelectDrive switches, this tube allows easy adjustment of five CCT options and three lumen levels to suit various applications. Without costly on-site audits or complex programming, a single tube covers nearly all standard lighting requirements, effectively optimizing inventory management for emergency lighting.

Innovative Unlock System – Tool-Free Reset During Installation

PRE-INSTALLATION STATE & POST-INSTALLATION STATE

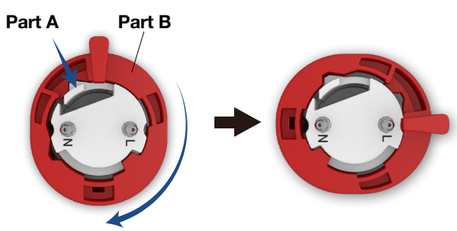

Pre-installation State

Post-installation State

TOOL-FREE RESET TO PRE-INSTALLATION STATE

Press and hold **Part A** to unlock, rotate the **Part B** to reset to pre-installation state

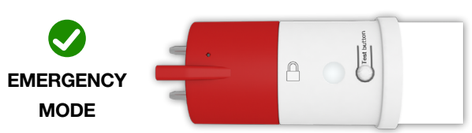

In the event of accidental twist-lock system activation before installation, the tube supports tool-free reset to its pre-installation state-saving time, labor, and on-site hassle.

Built-In Emergency Battery – Eliminates the Need for External Emergency Drivers

Designed with integrated emergency battery back-up, GREEN CREATIVE's innovative emergency TLED lamp eliminates the need to install an auxiliary emergency power supply, drastically reducing installation time and costs.

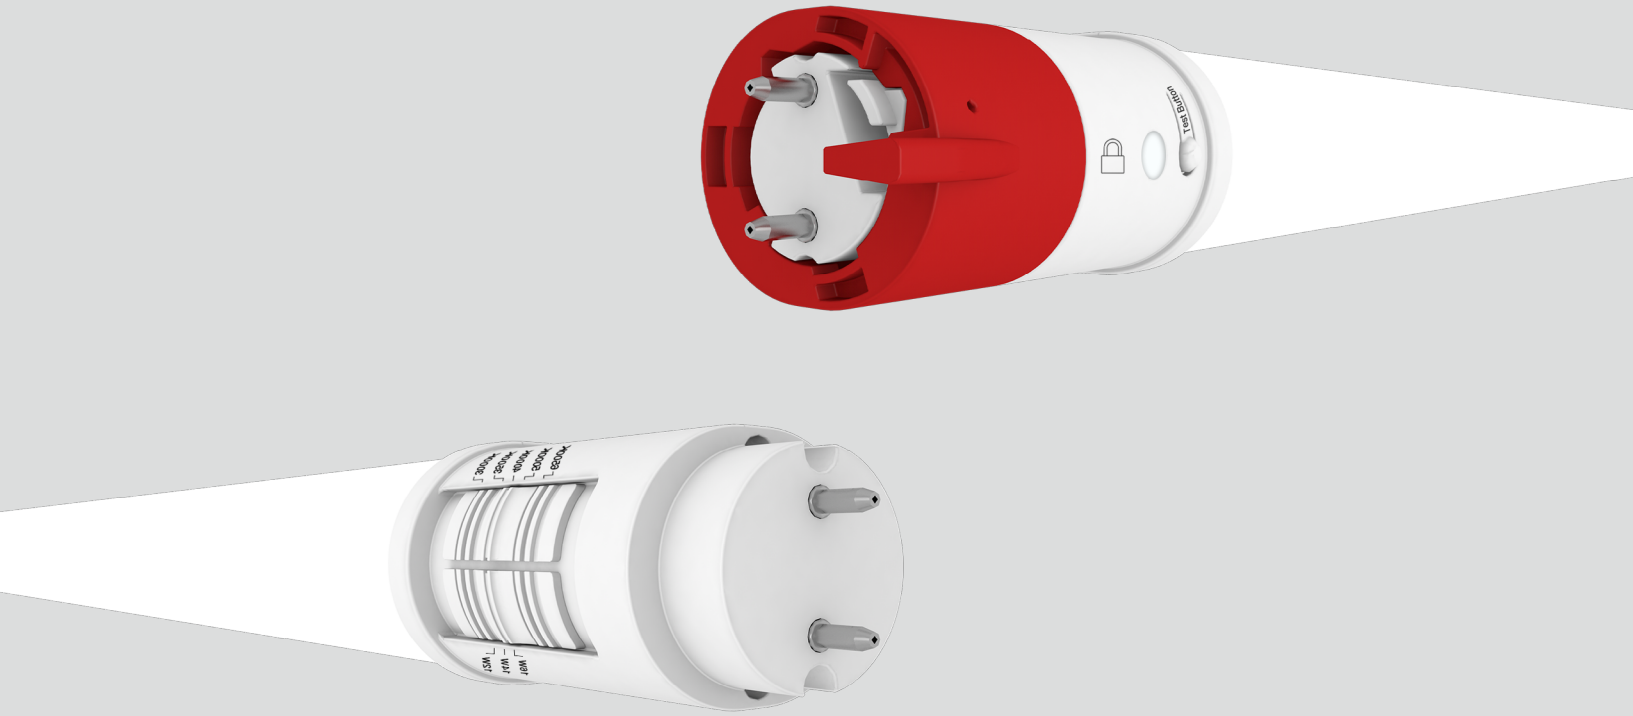

Automatic Battery Activation – Emergency Mode Ready Upon Installation

For ease of use, the built-in battery protection circuit is pre-activated at shipment. It automatically enables emergency mode once the emergency tube is fitted into the fixture. No any additional manual setup for emergency mode needed after installation.
