FEATURES

- Class 2 power supply
- IP20-rated case with silicone-based potting
- Complies with ENERGY STAR®, DLC (DesignLight Consortium®) and CA Title 24 technical requirements
- Lifetime: 50,000 hours min
- Worldwide safety approvals

TYPICAL APPLICATIONS

- Signage
- Strip lights

5 - PROTECTION FEATURES

Under-Voltage (Brownout)

The VIM series provides protection circuitry such that an application of an input voltage below the minimum stated in section 1 (Input Specification) shall not cause damage to the driver.

Internal Over temperature Protection

The VIM is equipped with an internal temperature sensor on the primary power train. Failure to stay within the convection power rating will cause the driver to shut down. The main output current will be resumed when the temperature of the built-in temperature sensor cools adequately.

Output Open Load

A no load condition will not damage the VIM or cause a hazardous condition. The driver will remain stable and operate normally after application of a load. When the LED load is removed, the output voltage of the VIM series is limited to 7% about the output voltage of each model.

Over Power Protection

The VIM will shut down and auto recover in an over power condition. This condition will cause no damage to the power supply.

Input Over Current Protection

The VIM series incorporates a primary AC line fuse for input over current protection.

Short Circuit and Over Current Protection

The VIM series is protected against short-circuit such that a short from any output to return shall not result in a fire hazard or shock hazard. The driver shall hiccup as a result of a short circuit or over current fault. Removal of the fault will return the driver to within normal operation. The driver shall recover, with no damage, from a short across the output for an indefinite period of time.
