

## 6 to 40 W Constant Current LED Drivers with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

Nominal Input Voltage	Max. Output Power	Output Voltage	Output Current	Efficiency	Max. Case Temperature	THD	Power Factor	Dimming Method	Dimming Range	Startup Time
120 to 277 Vac	40 W	6 to 56 Vdc	180 mA to 1.75 A CC	up to 87% typical	90°C (measured at the hot spot)	< 20%	> 0.9	Forward-Phase, Reverse-Phase & 0 - 10V	1 - 100% (% of Iout)	400 ms

CC: Constant Current

**ESS Plastic case:**  
L 84 x W 40 x H 25 mm  
(L 3.30 x W 1.57 x H 0.99 in)

**ESST Thermally Enhanced Plastic Case (ESST040 ONLY):**  
L 84 x W 40 x H 27 mm  
(L 3.30 x W 1.57 x H 1.06 in)

### FEATURES

- Compatible with TRIAC (forward-phase or leading-edge), ELV (reverse-phase or trailing-edge) and 0-10 V dimmers
- TRIAC and ELV dimming only at 120 Vac
- 90°C maximum case hot spot temperature
- Class 2 power supply
- Lifetime: 50,000 hours at 70°C case hot spot temperature
- IP64-rated (IP66 for ESST) case with silicone-based potting
- Protections: output open load, over-current and short-circuit (hiccup), and over-temperature with auto recovery
- Conducted and radiated EMI: Compliant with FCC CFR Title 47 Part 15 Class B (120 Vac) and Class A (277 Vac)
- Complies with ENERGY STAR®, DLC (DesignLight Consortium®) and CA Title 24 technical requirements

### APPLICATIONS

- Indoor & outdoor
- Recessed lighting (downlights)
- Commercial & residential lighting
- Architectural lighting
- Office Lighting

\* The forward voltage (Vf) of the LED load should not exceed Vout Max. of the driver under worst case field operating conditions which are the Vf max. of the LED load under lowest temperature and highest forward current conditions. As a general design guideline, the nominal LED load Vf measured at the operating current and at room temperature should be ≤ Vout Nom. of the driver.

#### Notes

- 1) Models with the "-Y1" suffix exhibit a non-linear 0-10V dimming profile: 10V to 9.1V=100%, 1.2V to 0.6V=1%, Dim to off <0.68V.
- 2) Models with the "-Z1" suffix exhibit a non-linear 0-10V dimming profile: 10V to 8.1V=100%, 1V to 0.8V=1%, Dim-to-off <0.8.

## 6 to 40 W Constant Current LED Drivers with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

### 4 - 0-10 V DIMMING CONTROL (@25°C ambient temperature)

	Units	Minimum	Typical	Maximum	Notes
<b>+Dim Signal, -Dim Signal</b>		The ESS/ESST series operate only with 0-10V dimmers that sink current. The method to dim the output current of the driver is done via the +Dim/-Dim Signal pins. The +Dim/-Dim signal pins can be used to adjust the output setting via a standard commercial wall dimmer, an external control voltage source (0 to 10 Vdc), or a variable resistor when using the recommended number of LEDs. The dimming input permits 1% to 100% dimming.			
<b>Dimming Range (% of Iout)</b>	%	1		100	<ul style="list-style-type: none"> <li>The dimming range is dependent on each specific dimmer. It may not be able to achieve 1% dimming with some dimmers.</li> <li>Dimming performance is optimal when the driver is operated at its nominal output voltage matching the LED nominal Vf (forward voltage). Dimming performance may vary when the driver is operated near its minimum output voltage.</li> </ul>
<b>Current Supplied by the +Dim Signal Pin</b>	mA			1	
<b>Output Current Tolerance While Being Dimmed</b>	%			±8	The tolerance of the output current while being dimmed is ≤ +/-8% until down to 1V.
<b>Isolation</b>	The 0-10 V circuit is isolated from the AC input and meets Class II reinforced/double insulation power supply. <input type="checkbox"/>

### 7 - PROTECTION FEATURES

#### Under-Voltage (Brownout)

The ESS/ESSTxxxW series provides protection circuitry such that an application of an input voltage below the minimum stated in paragraph 1 (Input Specification) shall not cause damage to the driver.

#### Short Circuit

The ESS/ESSTxxxW series is protected against short-circuit such that a short from any output to return shall not result in a fire hazard or shock hazard. The driver shall hiccup as a result of a short circuit or over current fault. Removal of the fault will return the driver to within normal operation. The driver shall recover, with no damage, from a short across the output for an indefinite period of time.

#### Internal Over temperature Protection

The ESS/ESSTxxxW series incorporates circuitry that prevents internal damage due to an over temperature condition. An over temperature condition may be a result of an excessive ambient temperature or as a result of an internal failure. When the over temperature condition is removed, the driver shall automatically recover.

#### Output Open Load

When the LED load is removed, the output voltage of the ESS/ESSTxxxW series is typically limited to 1.3 times the maximum output voltage of each model.

## 6 to 40 W Constant Current LED Drivers with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

### 8 - PREDICTED LIFETIME VERSUS CASE AND AMBIENT TEMPERATURE

Lifetime is defined by the measurement of the temperatures of all the electrolytic capacitors whose failure would affect light output under the nominal LED load and worst case AC line voltage. The graphs in figure 1 & 1bis are determined by the electrolytic capacitor with the shortest lifetime, among all electrolytic capacitors. It represents a worst case scenario in which the LED driver is powered 24 hours/day, 7 days/week. The lifetime of an electrolytic capacitor is measured when any of the following changes in performance are observed:

- |  |  |
|--|--|
| 1) Capacitance changes more than 20% of initial value                          | 2) Dissipation Factor ( $\tan \delta$ ): 150% or less of initial specified value |
| 3) Equivalent Series Resistance (ESR): 150% or less of initial specified value | 4) Leakage current: less of initial specified value                              |

**ESS030W-0620-42 (26 W, 620 mA @ 42 V max)**  
Predicted Lifetime vs Temperature

**ESS030W-1100-27 (28 W, 1100 mA @ 27 V max)**  
Predicted Lifetime vs Temperature

Figure 1

- Notes:
- The ambient temperature  $T_{ambient}$  and the differential between  $T_{ambient}$  and  $T_{case}$  mentioned in the above graphs are relevant only as long as both the driver and the light fixture are exposed to the same ambient room temperature. If the LED driver is housed in an enclosure or covered by insulation material, then the ambient room temperature is no longer valid. In this situation, please refer only to the case temperature  $T_{case}$ .
  - It should be noted the graph "Lifetime vs. Ambient Temperature" may have an error induced in the final application if the mounting has restricted convection flow around the case. For applications where this is evident, the actual case temperature measured at the  $T_c$  point in the application should be used for reliability calculations.

## 6 to 40 W Constant Current LED Drivers with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

### 8 - PREDICTED LIFETIME VERSUS CASE AND AMBIENT TEMPERATURE (CONTINUED)

Figure 1 bis

Notes:

- The ambient temperature  $T_{ambient}$  and the differential between  $T_{ambient}$  and  $T_{case}$  mentioned in the above graphs are relevant only as long as both the driver and the light fixture are exposed to the same ambient room temperature. If the LED driver is housed in an enclosure or covered by insulation material, then the ambient room temperature is no longer valid. In this situation, please refer only to the case temperature  $T_{case}$ .
- It should be noted the graph "Lifetime vs. Ambient Temperature" may have an error induced in the final application if the mounting has restricted convection flow around the case. For applications where this is evident, the actual case temperature measured at the  $T_c$  point in the application should be used for reliability calculations.

## 6 to 40 W Constant Current LED Drivers with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

### 9 - PHASE-CUT DIMMING

Dimming of the driver is possible with standard TRIAC-based incandescent dimmers that chop the AC voltage as shown in Figure 2, or with ELV dimmers. During the rapid rise time of the AC voltage when the dimmer turns on, the driver does not generate any voltage or current oscillations, and inrush current is controlled. During the on-time of the AC input, the driver regulates the output current based upon the conduction angle. The RMS value of the driver output current is proportional to the on-time of the AC input voltage. When operating with an incandescent dimmer, the RMS output current varies depending upon the conduction angle and RMS value of the applied AC input voltage. Figure 3 shows the typical output current versus conduction angle at nominal input voltage.

The ESS/ESST series offers tri-mode dimming compatibility with both phase-cut (reverse-phase and forward-phase) and 0-10V dimmers. Phase-cut dimming always has priority over 0-10 V dimming. Please note the compatibility for the different ESS/ESST models:

- ESSxxxW models: TRIAC and ELV dimming only at 120 Vac
- ESSxxxE models: ELV dimming only at 230 Vac

When using low power ESS models (specifically < 10 W) with a reverse-phase or forward-phase dimmer, always make sure the minimum required load is applied to the dimmer. Check the dimmer documentation for minimum load requirements.

Leviton	VPE06	Lutron	LG-600P		

For each model in the ESS/ESSTxxxW series, dimming compatibility tables are available for download from [www.erp-power.com](http://www.erp-power.com).

## 6 to 40 W Constant Current LED Drivers with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

### 11 - 0-10 V DIMMING

The ESS drivers operate only with 0-10V dimmers that sink current. They are not designed to operate with 0-10V control systems that source current, as used in theatrical/entertainment systems. Developed in the 1980's, the 0-10V sinking current control method is adopted by the International Electrotechnical Commission (IEC) as a part of their IEC Standard 60929 Annex E.

The method to dim the output current of the driver is done via the +Dim/-Dim Signal pins. The +Dim/-Dim Signal pins respond to a 0 to 10 V signal, delivering 1% to 100% of the output current based on rated current for each model. A pull-up resistor is included internal to the driver. When the +Dim wire (purple) is short circuited to the -Dim wire (grey) or to the -LED wire (black), a small amount of current may be present on the output and, in that condition, shimmering may be observed. If the +Dim input is  $\leq 1$  V and  $\geq 0.6$  V, the output current is still present, as shown in figure 4. **Please note that short circuiting the +Dim wire (purple) to the -Dim wire (grey) does not guarantee that the output current is turned off. In some models, the current may turn off when short circuiting the +Dim wire to the -Dim wire. In other models, there may be a small amount of current still present.**

If the +Dim input is  $> 10$  V or open circuited, the output current is programmed to 100% of the rated current.

When not used, the -Dim wire (grey) and the +Dim wire (purple) can be individually capped or cut off. In this configuration, no dimming is possible and the driver delivers 100% of its rated output current.

The maximum source current (flowing from the driver to the 0-10V dimmer) supplied by the +Dim Signal pin is  $\leq 1$  mA. The tolerance of the output current while being dimmed shall be  $\pm 8\%$  typical until down to 1 V.

The linear 0-10V dimming profile is the default profile across most models of the ESS series. In the linear 0-10V dimming profile, shown in figure 4, 10 V = 100% of the output current and 1 V = 10 % of the output current.

Models with the "-Z1" or "-Y1" suffix exhibit a non-linear 0-10 V dimming profile with dim-to-off, as shown in figure 5:

- Models with the "-Y1" suffix: 10V to 9.1V=100%, 1.2V to 0.6V=1%, Dim to off  $< 0.68$ V.
- Models with the "-Z1" suffix: 10V to 8.1V=100%, 1V to 0.8V=1%, Dim to off  $< 0.8$ V.

Please note the non-linear 0-10V dimming profile with dim-to-off requires the addition of a small plastic dongle (L 33 mm x W 15.7 mm x H 10 mm or L 1.3 in x W 0.62 in x 0.39 in) outside of the driver case.

The non-linear curve is recommended when using standard in wall 0-10 V logarithmic dimmers to avoid having insufficient source current available to pull the dimmer up to 10V and to account for the inability of the dimmer to pull below approximately 0.9V. In these type of installations, the modified transfer function will ensure 100% light output and dimming to 1%, regardless of the number of drivers on the 0-10V dimming line. Please contact your sales representative or send an email to: [SaveEnergy@erp-power.com](mailto:SaveEnergy@erp-power.com) for additional information.

### 11 - 0-10 V DIMMING (CONTINUED)

A fixed or variable resistor can be also used from the +Dim signal pin to the -Dim pin to adjust the output current. Figure 6 show the relationship of the output current to a resistor connected across the 0-10V dimming input. This is a typical graph for the entire ESS/ESST series but is not specific to a particular model. This graph may vary from one model to the next.

### 12 - COMPATIBLE 0-10 V DIMMERS

- Lutron, Nova series (part number NFTV)
- Lutron, Diva series (part number DVTV)
- Leviton, IllumaTech series (part number IP710-DL)

## 6 to 40 W Constant Current LED Drivers with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

### 13 - MECHANICAL DETAILS: ESS010, ESS015, ESS020, ESS030 SERIES

- Packaging Options:** Plastic case
- I/O Connections:** Flying leads, 18 AWG on power leads, 22 AWG on 0-10V dimming wires, 152 mm (6 in) long, 105°C rated, stranded, stripped by approximately 9.5mm, and tinned. All the wires, on both input and output, have a 300 V insulation rating.
- Ingress Protection:** IP64 rated
- Flammability Rating:** UL94 V-0. (For 5VA flammability, please use the ESSV series).
- Mounting Instructions:** The ESS driver case must be secured on a flat surface through the two mounting tabs, shown here below in the case outline drawings.

### 14 - OUTLINE DRAWINGS: ESS010, ESS015, ESS020, ESS030 SERIES

- Dimensions:** L 84 x W 40 x H 25.2 mm (L 3.30 x W 1.57 x H 0.99 in)
- Volume:** 84.7 cm<sup>3</sup> (5.16 in<sup>3</sup>)
- Weight:** 154 g (5.4 oz)

**Figure 7**

## 6 to 40 W Constant Current LED Drivers with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

15 - OUTLINE DRAWINGS: ESS010, ESS015, ESS020, ESS030 MODELS WITH “-Y1” and “-Z1” SUFFIX

**Dimensions:** L 84 x W 40 x H 25.2 mm (L 3.30 x W 1.57 x H 0.99 in)

**Volume:** 84.7 cm<sup>3</sup> (5.16 in<sup>3</sup>)

**Weight:** 154 g (5.4 oz)

All dimensions are in mm

Figure 8

## 6 to 40 W Constant Current LED Drivers with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

### 16 - MECHANICAL DETAILS: ESST40 SERIES

- Packaging Options:** Plastic case
- I/O Connections:** Flying leads, 18 AWG on power leads, 22 AWG on 0-10V dimming wires, 152 mm (6 in) long, 105°C rated, stranded, stripped by approximately 9.5mm, and tinned. All the wires, on both input and output, have a 300 V insulation rating.
- Ingress Protection:** IP66 rated
- Flammability Rating:** UL94 V-0. (For 5VA flammability, please use the ESSV series).
- Mounting Instructions:** The ESST driver case must be secured on a flat surface through the two mounting tabs, shown here below in the case outline drawings.

### 17 - OUTLINE DRAWINGS: ESST40 SERIES

- Dimensions:** L 84 x W 40 x H 27 mm (L 3.30 x W 1.57 x H 1.06 in)
- Volume:** 90.7 cm<sup>3</sup> (5.53 in<sup>3</sup>)
- Weight:**

All dimensions are in mm
