

WATTSTOPPER® PLUS POLARIS MONITOR

Advanced Lighting Control Software

#LegrandImprovingLives

POLARIS

Bring Visibility & Control to the Wattstopper PLUS System

Polaris Monitor is the centralized monitoring and management experience for Wattstopper PLUS. From a single interface, users can monitor system health, understand energy and occupancy trends, troubleshoot issues and manage connected spaces. It empowers users with intuitive tools to maximize energy efficiency and occupant comfort through a single, secure interface.

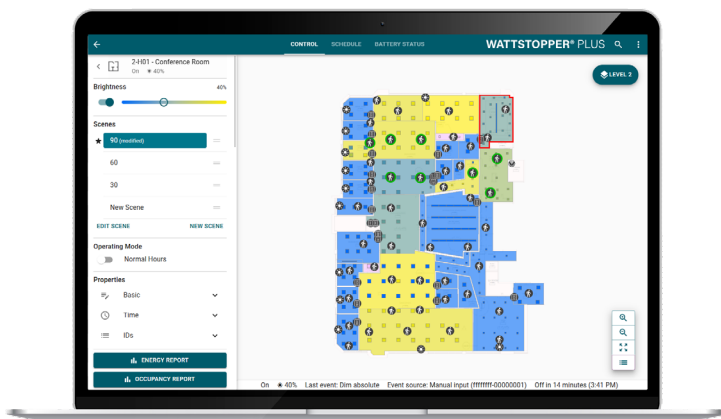

- Real-time visibility into lighting, occupancy, and system health
- Built-in reporting for energy, sensors, and performance insights
- Complete event logs for faster troubleshooting
- Flexible user management with role-based permissions
- Custom alerts and notifications to stay informed

One Connected View at Your Fingertips

- **Information at a Glance:** The high-level dashboard provides an immediate view of your entire building or campus status, making it easy to see real-time conditions.
- **Intuitive Navigation:** Use integrated floorplan views to navigate complex spaces spatially. Monitor individual zones, check luminaire status, and adjust settings with a single click.
- **Troubleshooting to Go:** Experience true mobility with multi-device access. Manage your system from a desktop, laptop, tablet, or smartphone from anywhere in the facility.

Data-Driven Insights

- **Advanced Reporting:** Access readily available insights into power consumption, occupancy trends, and energy savings to optimize building performance.
- **Real-Time Analytics:** The Event History module tracks system actions, providing a comprehensive log for auditing and performance analysis.
- **Energy Savings Strategies:** Monitor the effectiveness of daylight harvesting and occupancy-based control to meet sustainability goals.

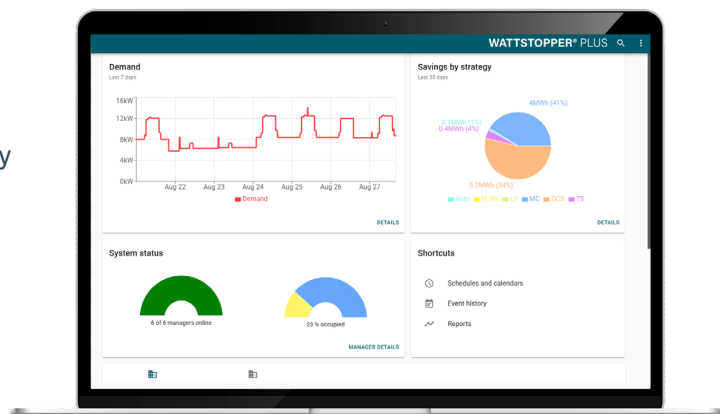

Seamless Integration & Scalability

- **Unified Management:** Wattstopper PLUS integrates effortlessly with BACnet®, AV systems, and motorized shading, allowing you to manage disparate building technologies through one platform.
- **Future-Ready Performance:** Whether it is a new construction or a major renovation, Polaris scales to support wired (GreenBus), wireless, or hybrid system designs.
- **Plug & Go Simplification:** Devices are automatically recognized upon connection, ensuring the system is quick to install and remarkably simple to manage.

Enterprise-Grade Security

- **TLS Encryption:** Benefit from built-in access encryption and authentication, providing a high level of data security and system confidence.
- **Configurable Access:** Define specific user permission levels to ensure the right people have the right level of control over your lighting infrastructure.
